

### Presentation on Applied Period Freiburg, Germany (01.10-16.12.09)

Presented by: MScEF student Dzmitry DZIAMYANAU Supervised by: Prof. Dr Gerhard OESTEN Dr. Roderich von DETTEN

# Institut für Forstökonomie

### Content

- Apply Period assignments
- Weekly plan of activities
- Research process
- 1) Country report
- o 2) Qualitative research

### **Applied Period assignments**

Initial tasks

- Overview of forest economic issues;
- Meeting experts and discussing related issues;
- Meeting official requirements of Applied Period;

#### Decisions

- o Study relevant literature
- 1) Belarusian Country Report on "Forests&Bioenergy"
- O 2) Conduct qualitative research on bio-energy development in Belarus: preliminary interviews

Dec	Analyzing and writing report																													

### Research process

- Weekly meetings with supervisors;
- Consultations with colleagues;
- Excursion trips;
- Library & Internet research;
- Taking part in academic institute's sessions

(colloquiums, presentation, defenses).

### 1) Belarusian Country report...

) Institut für Forstökonomie

#### Strategy

- Literature study
- Writing report

### 1) Belarusian country report...

Institut für Forstökonomie

#### Objective:

To share and analyze general technical information related forest resources, their availability and assessment of the potential for their usage for bio-energy production in Belarus needed for qualitative research.

#### Structure:

- Forest characteristics
- Species composition and age structure
- Forest management issues
- Forest utilization
- Assessment of fuel wood potential
- Current state of the wood-fuel production
- Market analysis

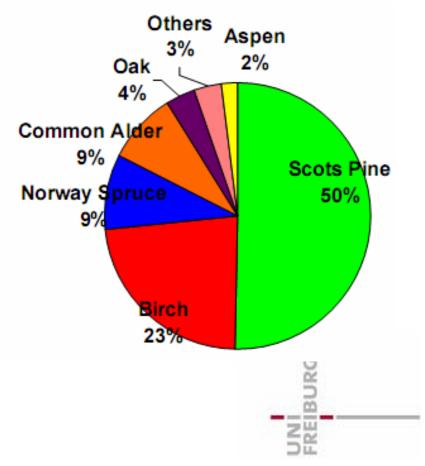

### 1) Belarusian country report..

Institut für Forstökonomie

#### Some data:

- Total area of the forest fund9.4 million ha;
- Area covered by forests7.9 million ha;
- Percentage of forest cover 38.1%;
- Total annual increment30 million m3/year
- Total timber logging
  15 million m3/year

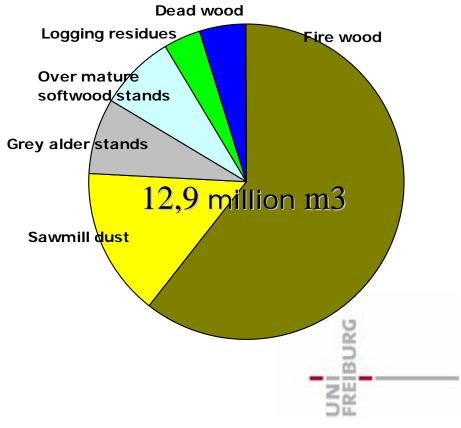

### 1) Belarusian country report

Institut für Forstökonomie

- Total possible volume of wooden resources for energy 12,9 million m3/year
- Can be used for production of enhanced bio-fuels (pellets, brickets) 4,7 million m3/year
- Currently used for pellet production 0.13 million m3/year

#### Problem

Slow development of bio-energy industry and lack of information on it.

#### Purpose

- Study how research work is carried out.
- Identify, verify and analyze the key issues of bio-energy development in Belarus;
- Determine the general 'barriers' and 'drivers' of the wood based bio-energy sector in Belarus;

#### Objectives

- to explore general problems that pellet producers face (financial, technological, etc);
- to explore general constrains for promotion of pellets at home and foreign markets;
- to explore possible needed actions that could affect promotion of wood pellets consumption in the local market;
- to identify the potential actors in bio-energy products production.

### Strategy:

- Literature review
- Methodology development
- Conducting pre-interviews
- Analysis and reporting

Institut für Forstökonomie

#### Three target groups for interviewing were selected:

Suppliers

#### Producers

#### End users

FREBURG

### Qualitative research

#### Methodology

- Three target groups were selected for the survey;
- Questions were developed for each target group;
- Individuals for interviewing were randomly selected from each target group;
- The total amount of interviewers were 9 (3 from each target group);
- Interviews were conducted via mails and telephone conversations;
- Semi-structured interview scheme was applied.

#### Results

- Experience methodology for the forthcoming detailed research;
- Issues that should to be investigated in upcoming surveys, some of them are:
  - a) lack of government's incentives regarding private owned plants;
  - b) lack of investments;
  - c) lack of technical capacity in all target groups;
  - d) insufficient state policy towards bio-energy development.

#### Conclusions

Provided materials and methodology can be used for detailed qualitative research study – questionnaire.

### Thank you!
